## Notes

- Load capacities given in the table are for Flormesh® spanning the LWM direction over a clear span with every fourth strand welded to the support and a minimum landing of 25mm (preferred industry standard).
- Uniform distributed load is the maximum load just prior to permanent deflection (yield) of mesh. Permanent yield is span/500 or 0.80mm, whichever is greater.
- Deflections in the tables refer to uniform distributed loads causing a deflection of 10mm or span/360, whichever is less.
- Concentrated loads were applied through a 100mm diameter plate. They correspond to a localised deflection of 10mm.
- For large spans the load carrying capacity is generally governed by deflection; for double and triple spans by uniform or concentrated loads.
- A load of 102kg approximates to 1kN. A load of 102 kg/m<sup>2</sup> approximates to 1kPa.
- Flormesh® clip sets are available ex-stock.

## GENERAL INFORMATION

### Sheet Dimensions

2400 LWM x 1200 SWM  
This sheet is 2400mm LWM x 1200mm SWM

1200 LWM x 2400 SWM  
This sheet is 1200mm LWM x 2400mm SWM

### Materials

Expanded metal sheets can be supplied in the following materials:

- > Untreated mild steel
- > Galvanised mild steel

### Tolerances

All measurements specified are nominal and approximate only. Although every effort is made to ensure these dimensions are accurate, they are subject to standard industrial manufacturing tolerances.

## NEPEAN Building and Infrastructure

Originally founded as Graham Group, NEPEAN Building & Infrastructure is one of Australia's largest fully integrated manufacturer and supplier of metal products for the industrial and commercial building sectors.

## Weldlok®

Grating, handrail and drainage products

## Galintel®

Galvanised steel lintels

## Mastermesh®

Expanded and perforated metals

## Galserv®

Hot-dip galvanising
